

The best cat litter box system in the world

ENG

Instructions

1 The PeeWee cat litter box consists of a top tray with a sieve (A) and a bottom tray (B). Fill the top tray up to the mark with PeeWee pellets (approx. 2 cm).

There's no need to use more than that!

The first time the tray is used, put a handful of PeeWee pellets in the bottom tray to absorb the moisture.

2 When the cat urinates, approx. 90% of the urine disappears through the sieve into the bottom tray. The rest is absorbed by the pellets in the top tray, which then disintegrate into sawdust.

3 As the cat digs, soiled sawdust in the top tray falls through the sieve into the bottom tray. Shake the top tray or use the scoop to make sure all the soiled sawdust ends up in the bottom tray. If necessary, top up the PeeWee pellets in the top tray to the level indicated.

4 Remove the faeces once a day using the PeeWee scoop.

5 Empty the bottom tray when it's nearly full (approx. once a week). The more sawdust in the bottom tray, the more the urine smell will be absorbed.

6 Clean the bottom tray. Do not use scourers or abrasives, as these will leave tiny scratches, which are a breeding ground for odour-causing bacteria. Avoid using aggressive cleaning products such as chlorine. Use a mild soap solution or hot water with vinegar or baking soda.

Greetings to the cat!

The unique PeeWee wood pellets

PeeWee wood pellets are made by Mockfjärds Biobränsle in Sweden. They also make wood pellets as biofuel.

In Sweden, wood pellets are a commonly used fuel for heating systems. The pellets are made from sawdust, a by-product from the wood industry. The sawdust is first dried and then compressed under very high pressure to form pellets.

PeeWee pellets are made on a separate production line in the same factory. PeeWee pellets can only be made when a specific kind of carefully selected trees are sawn. These trees are selected on the basis of thorough research

for their absorption capacity and ability to neutralise the smell of ammonia – specific properties that are due to the cold climate in which the trees grow.

Unlike other cat litter wood pellets, PeeWee pellets never contain residue of leaves or bark.

PeeWee wood pellets are always made from the same trees, guaranteeing the same consistent quality. No additives are used whatsoever – no aromatic substances, glues, binding agents or any other chemicals. The "secret" lies in the compression under high pressure and the long drying process, which prevents the pellets from freezing or rotting.

Getting used to the PeeWee cat litter box system

Every cat is different, but the owner's approach also plays an important role in how quickly a cat will accept and use the PeeWee cat litter box system.

Patience

Some cats will accept the PeeWee cat litter box system more quickly than others. Some may even take a few weeks to get used to the change. The key to success is not to rush anything. Persevere and be patient.

Time

Give your cat time to inspect the PeeWee litter box. Leave the door to the room it is in open and give your cat a treat. Praise and encourage your cat if it starts investigating. Let it be inquisitive

and get acquainted with the Pee Wee litter box in its own time.

Different location

If you plan to have the PeeWee cat litter box in a different room to where the old litter box used to be, start by moving the old litter box to the new room.

If the new room is far from the old one, move the old litter box little by little to give your cat time to get used to the new location of the litter box. Leave the old litter box in the new location but stop cleaning it.

More tips

Optionally cover the PeeWee pellets with a layer of the cat litter your cat is used to. Gradually use more PeeWee pellets and less of the old litter in the PeeWee litter box. Your cat can then slowly but surely get used to the PeeWee cat litter box system.

NB: The PeeWee litter box system will not work optimally as long as the PeeWee pellets are mixed with other types of litter.

The wood pellets are extremely economical and 100% biodegradable!
